

extra INNOVATIVE

By now, we've all heard the benefits of conditioning our household water: smooth skin, cleaner, longer lasting clothes, prolonged life of appliances, etc. What you may not have heard is water conditioning units can be beautifully designed and hassle free to operate.

extraPure water conditioners, developed by The LeverEdge, not only bring you clean, soft water, they offer the discerning homeowner exclusive features never considered until now. These exciting new features include an adjustable 7-cycle purification process, full color remote mountable user interface, and electrical outage defense. extraPure also boasts rugged, classic design with a one piece stainless steel body, so it never becomes an eyesore.

How often do you look at your water conditioner? In most cases, not often. But if The LeverEdge put that much thought into designing the outside... how much do you think they put on the inside?

extra CONFIDENT

extraPure's dynamic command center, or "brain", sets this unit apart from the rest. Color LCD monitor displays everything you need to know; system performance, water flow, system regeneration status and other system functions.

Peace of mind is important and the engineers behind extraPure strive to provide it at every opportunity. The power failure technology incorporated in extraPure goes far and above other models by never relying on a battery to maintain operation. In the event of an electrical outage, your extraPure model turns on its' built-in "super capacitor" which retains all dynamic system settings for up to 24 hours. Additional essential system function settings are stored in NOVRAM memory, just like what's in your home computer, so the information is never lost and you never unwittingly use hard water.

Now let's just say that your extraPure unit is in an area of your home that's not so easy to get to. Not to worry, the engineers considered this in the design as well. extraPure's control center user interface is detachable! Controls can be mounted away from your extraPure water conditioner, giving you complete ease of use.

All these features provide advanced service diagnostics, making performance analysis a snap and ensuring that the unit maintains its "salt sipper" efficiency.

extraPure works extra hard to maintain exact levels of cleanliness... all the way through to the filtration media. extraPure's system purification utilizes a seven step sequence, one of which is the most unique. A low electric current is sent through two built-in titanium plates which cause a molecular reaction creating a special cleansing solution. This decontamination solution effectively inhibits bacteria growth. Before the unit returns to service, the chamber is thoroughly flushed with conditioned water.

Upon installation, your extraPure system will be equipped with the proper levels of filtration media depending on your family's needs. extraPure uses only high quality BlackCat resins and your authorized dealer will determine the media levels to suit your household.

extra CLEAN

ACTIVATED CARBON

Removes chlorine, unpleasant taste and odor.

BLACKCAT RESIN

High capacity resin removes more iron and hardness causing minerals.

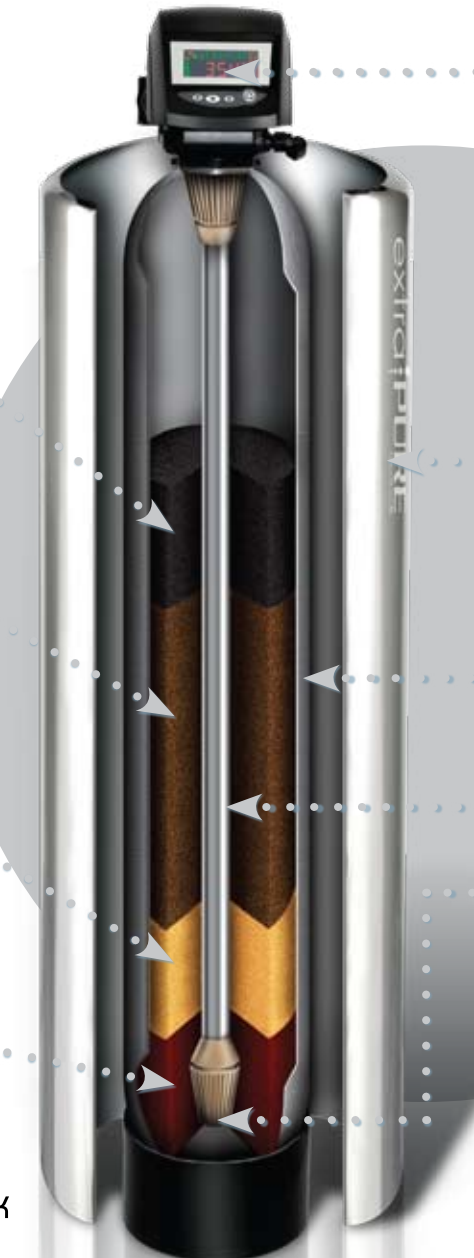

KDF™

Inhibits bacteria growth and removes heavy metals.

GARNET

Provides sediment filtration and even distribution of water.

DYNAMIC COMMAND CENTER

Information at a glance. Color LCD screen tells you everything you need to know about system operation.

STAINLESS STEEL OUTER BODY

Modern design for today's consumer. High luster surgical grade stainless steel casing features superior aesthetics and durability.

INNER FILTRATION MODULE

Where form meets function.

Polyglass filtration chamber offers advanced protection from corrosion and is impervious to water when compared to conventional fiberglass construction.

1.3" distribution duct is larger than other models, assuring you excellent water flow, even during times of high usage.

Lastly, extraPure features a lead-free design, which eliminates your water's contact with any metal components. Your water is always clean & extraPure.
